Summary

Artificial Intelligence graduate with hands-on experience in machine learning, computer vision, and full-stack development. Delivered production-grade models and tools with measurable impact, including a diagnostic AI system reaching 94% accuracy and web applications that cut page load times by 30%.

Education

Dawood University of Engineering & Technology October 2022 – August 2026
Bachelor of Science in Artificial Intelligence *Karachi, Pakistan*

Experience

AI Intern Oct 2024 – Jan 2025
Onestop Vendors *Karachi, Pakistan*

- Developed and validated machine learning models for healthcare prediction tasks, improving classification accuracy by 20% through feature engineering and hyperparameter tuning
- Deployed AI-driven solutions into active use by a cross-functional team, and collaborated with senior colleagues to clean and preprocess real-world healthcare datasets

Web Developer Intern Oct 2023 – Nov 2023
Cod-Soft *Karachi, Pakistan*

- Designed and built 5+ responsive web pages using Flask and Streamlit, reducing average page load time by 30%
- Implemented backend logic and front-end components, testing and refining features with design and QA counterparts to improve user experience

Projects

PulmoOncoSight: AI-Powered Lung Cancer Detection (FYP) | *Python, PyTorch, ViT, U-Net*

- Engineered a full-stack, AI-powered diagnostic application combining a hybrid Vision Transformer and an Attention U-Net model, achieving 94% classification accuracy on a localized clinical dataset from Dow University of Health Sciences (DUHS)
- Independently led the project end-to-end as a capstone thesis – from data preprocessing and model architecture to training and evaluation – applying state-of-the-art computer vision to a real-world diagnostic problem

Brain Cancer Detector | *Python, TensorFlow/Keras, CNN*

- Designed and presented a brain cancer detection system achieving 85% accuracy across 500 MRI scans, showcased at the IEEEP STEP'24 Smart Tech Exhibition
- Built and trained a convolutional neural network pipeline for medical image classification, from preprocessing through evaluation

Emotion Detector | *Python, OpenCV, CNN*

- Built a real-time facial emotion recognition system classifying 7 distinct emotions with 90% accuracy
- Implemented live video-stream inference, enabling real-time predictions for interactive, user-facing applications

Farmers Management System | *Python, MySQL*

- Designed and deployed a MySQL-backed resource management system adopted by 10+ farmers, improving resource organization and productivity by 25%
- Built the database schema and application logic to streamline record-keeping for non-technical end users

Technical Skills

Programming Languages: Python, SQL, HTML
Frameworks & Libraries: Flask, Streamlit, Scikit-learn, TensorFlow, Keras
Machine Learning & AI: CNN, Vision Transformers, Attention U-Net, LLMs, Data Preprocessing, Model Evaluation
Data Analysis & Visualization: Pandas, NumPy, Matplotlib, Seaborn, Power BI, EDA
Developer Tools: GitHub, MySQL, Jupyter Notebook, Google Colab, VS Code, Twilio

Certifications

Data Analytics Professional Certificate – *Google* • Gen-AI Powered Data Analytics Job Simulation – *Forage* • Data Analytics Job Simulation (Forensic Technology) – *Deloitte via Forage*
AI Essentials and Prompt Essentials – *Google* • Excel Accounting Problem Certification – *Udemy*
